

Emergency Response Face Visor

In response to the current Covid-19 outbreak Ultimat Defence Limited has responded to requests by a number of Prisons and NHS Trusts to help in the production of PPE equipment.

The main request received has been for face visors to help protect against deliberate or accidental coughing, sneezing and spitting whilst carrying out essential duties. With this knowledge Ultimat has switched a large portion of its production to the design and manufacture of a new face visor to meet these needs.

Order on Tel: +44 (0) 1204 576 111

This face visor consists of a polypropylene visor with an elasticated strap that fastens around the head and secured in position using an adjustable fastener. The visor is held off the face using a foam spacer that also helps prevent any liquid or spit that may land above the visor from running down the face and into the eyes.

The visor has been manufactured in response to the emergency request for PPE and so is not medically certified. The use of the face visor will need to be risk assessed by an appropriate person.
